

SAP Solution Manager setup configurations

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

As part of the SAP Solution Manager setup, you must perform several configurations to enable SAP Solution Manager to interact with Event Management.

- **Configure RFC in SAP Solution Manager**

As part of enabling communication with Event Management, you must create a Remote Function Call (RFC) in the SAP Solution Manager and install a transport.

- **Configure SAP to forward alerts to your BADI**

After setting up SAP Solution Manager monitoring, you must configure SAP to forward alerts to the BADI (Business Add-in) you create as the first step in the SAP integration setup.

- **Configure the alert inbox in SAP Solution Manager**

Configure SAP solution manager to retrieve alerts in the system by enabling the alert inbox with the SOA manager.

- **View alerts in the SAP Solution Manager inbox**

You can view alerts generated in SAP Solution Manager to see any pressing issues. All alerts also forward to Event Management automatically.

- **View and update your SAP Solution Manager certificate**

View your SAP Solution Manager certificate, and update the certificate if necessary.

- **View the SAP interface log**

View the SAP interface log to help you debug issues.
