

Configure SAP to forward alerts to your BADI

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

After setting up SAP Solution Manager monitoring, you must configure SAP to forward alerts to the BADI (Business Add-in) you create as the first step in the SAP integration setup.

Before you begin

Role required: evt_mgt_admin

About this task

Third-party alerts get forwarded globally. You can configure the alert reaction only for a specific monitoring template.

Procedure

1. On the SAP UI, navigate to Application Operations > System Monitoring.
2. In the ribbon at the top of the System Monitoring configuration page, select 2 Configure Infrastructure > 2.3 Default Settings.
The Default Settings page appears.

Figure 1. Default Settings page

The screenshot shows the SAP 'Default Settings' page for 'Third-Party Components'. The page has a top navigation bar with tabs: 1 Overview, 2 Configure Infrastructure (selected), 2.1 Check Prerequisites, 2.2 Configure Manually, 2.3 Default Settings (active), and 2.4 Reporting - Settings. Below the navigation bar, there are buttons for 'Edit', '< Previous', 'Next >', 'Save', and 'Reset'. The main content area is titled 'Default Settings' and has a sub-tab 'Third-Party Components' selected. Under this tab, there are sections for 'Third-Party Component Variant' (set to 'None') and 'Third-Party Components' (set to 'Active'). Below these, there is a section 'Third-Party Connectors Assigned' with a table listing the connectors and their implementation status.

Third-Party Connector	Scope Filter	Implementation Status
Implementation: Badi Definition for Alert Reactions Z8NOW	All Alerts and Metrics	Active
	All Alerts, Events and Metrics (without Internal Events)	Obsolete or Inactive
	All Alerts	Obsolete or Inactive

3. Configure and activate a third-party component.
 - a. Enter edit mode by clicking the Edit button.
 - b. Select the Third-Party Components tab.
 - c. Click Add and add the following value as the third-party connector:
 Implementation: BADI Definition for Alert Reactions ZSNOW with
 scope = All Alerts and Metrics.
 - d. Click Save to activate third-party components globally.
4. Define the objects to which the monitoring template will be assigned.
 - a. In the ribbon at the top of the page, select 5 Define Scope.
 The Define Scope page appears.

Extended System ID	Extended System Type	Display Name	Configuration Mode	Auto. Conf. Status	Monitoring Status	Update Needed
AIO	Application Server ABAP	AIO on aglgesva101	Full	⚠	◇	⚠
D01	Application Server ABAP	D01 on chgvasd000s0	Full	◇	◇	◇
DEV	Application Server ABAP	DEV on cts57	Full	⚠	◇	◇

- b. Select the managed object to which you want to assign the monitoring template.
 The monitoring template is assigned to the selected objects.
5. Reactivate the monitoring of templates.
 - a. Select 6 Setup Monitoring.
 - b. Search for and locate entries with Setup Status = Reconfigure Required and assign the monitoring template to those entries.
 - c. Select Apply and Activate.
 When the jobs finish, verify that the Assignment Status is green.
 All templates and active alerts assigned to the selected objects use the new forwarding method.

What to do next

View alerts generated in SAP Solution Manager to see any pressing issues, as described in [View alerts in the SAP Solution Manager inbox](#).
