

View alerts in the SAP Solution Manager inbox

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

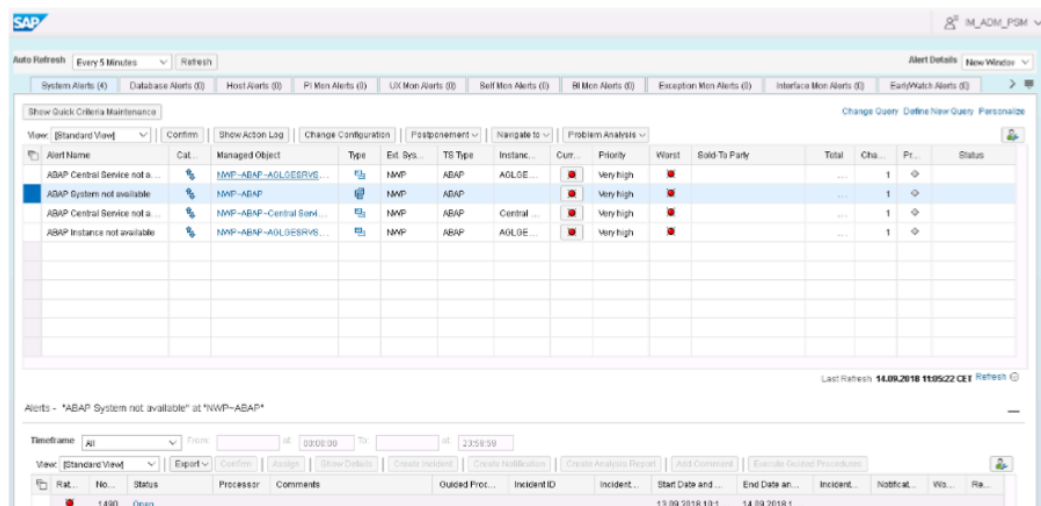

You can view alerts generated in SAP Solution Manager to see any pressing issues. All alerts also forward to Event Management automatically.

Before you begin

Role required: evt_mgt_admin

Procedure

1. On the SAP UI, open Solution Manager and select the System Alerts tab.

The screenshot displays the SAP Solution Manager interface for the 'System Alerts' tab. The top navigation bar includes 'Auto Refresh' (Every 5 Minutes) and 'Refresh'. Below the navigation bar, there are tabs for various alert categories: System Alerts (4), Database Alerts (0), Host Alerts (0), PI Mon Alerts (0), UX Mon Alerts (0), Self Mon Alerts (0), BI Mon Alerts (0), Exception Mon Alerts (0), Interface Mon Alerts (0), and EarlyWatch Alerts (0). The main table lists alerts with columns: Alert Name, Cat., Managed Object, Type, Ext. Sys., TS Type, Instance, Curr., Priority, Worst, Sold To Party, Total, Cha., Pr., and Status. The table shows four alerts, all with a 'Very high' priority and a status of 'Open'. The first alert is 'ABAP Central Service not available', the second is 'ABAP System not available', the third is 'ABAP Central Service not available', and the fourth is 'ABAP Instance not available'. Below the table, there is a section for 'Alerts - "ABAP System not available" at "WPP-ABAP"' with a 'Timestamp' filter set to 'All' and a 'From' date of '02.08.2018' to '22.08.2018'. The bottom of the screen shows a list of alerts with columns: Rat., No., Status, Processor, Comments, Guided Proc., Incident ID, Incident, Start Date and..., End Date and..., Incident, Notificat., Wo., and Ra... The first alert in this list is '1490' with a status of 'Open'.

Alert Name	Cat.	Managed Object	Type	Ext. Sys.	TS Type	Instance	Curr.	Priority	Worst	Sold To Party	Total	Cha.	Pr.	Status
ABAP Central Service not available		NMP-ABAP-ADLOESRV...	NMP	ABAP	ADLOE...			Very high			...	1		
ABAP System not available		NMP-ABAP	NMP	ABAP				Very high			...	1		
ABAP Central Service not available		NMP-ABAP-Central Ser...	NMP	ABAP	Central ...			Very high			...	1		
ABAP Instance not available		NMP-ABAP-ADLOESRV...	NMP	ABAP	ADLOE...			Very high			...	1		

The system alerts are listed on the page.

2. Navigate to (Event Management > All Alerts) to view the alerts in Event Management.

Number	Group	Severity	Priority	State	Source	Description	Node	Configuration Item	Maintenance	Task
Alert0010111		Critical	400	Open	SAP solution manager	ABAP Instance not available	NWP-ABAP-AGLGE5RVSAP04_NWP_00	false		
Alert0010110		Critical	400	Open	SAP solution manager	ABAP Central Service not available	NWP-ABAP-AGLGE5RVSAP04_NWP_00	false		
Alert0010114		Critical	400	Open	SAP solution manager	ABAP System not available	NWP-ABAP	false		
Alert0010113		Critical	400	Open	SAP solution manager	ABAP Central Service not available	NWP-ABAP-Central Service Instance	false		

The following table describes the field mapping between SAP Solution Manager and Event Management for alerts.

Table 1. Field mapping for SAP Solution Manager and Event Management

SAP Field	Event Management Field	Description
severity	severity	SAP uses a number from 1 (less critical) to 9 (more critical)
message_key	message_key	SAP message group ID, messageGUID
description	description	Event description
source	source	SAP system ID
managed_object_type	type	The type of the object, such as Host or Instance
node	node	Object name
managed_object_name	resource	Solution manager node name
N/A (there is no value provided by SAP. Event Management generates the indicated field.)	source instance	The event class must match the connector pull instance name, with the structure <Source>_<Client>.
source	additional_info.sid	SAP system ID
rating	additional_info.rating	Event color in SAP
resource	additional_info.mandant	SAP mandant
metric_name	metric_name	Metric name for the SAP event
time_of_event	time_of_event	Time of event in SAP

High CPU Usage on SAP Host

Scenario: An alert is generated in SAP Solution Manager when the CPU usage on a critical host exceeds 90% for more than 10 minutes.

Table 2. SAP Solution Manager Alert

Field	Value
Severity	8 (Critical)
Message Key	CPU_Overload_12345
Description	High CPU usage on SAPHost01
Source	SAP_Prod
Type	Host
Node	SAPNode_01
Time	2024-07-31T14:23:00Z

Here’s how the alert is mapped in Event Management:

Table 3. Mapped Event Management alert

Field	Value
Severity	8
Message Key	CPU_Overload_12345
Source	SAP_Prod
Type	Host
Node/Resource	SAPNode_01
Source Instance	SAP_Prod_100
SID	SAP_Prod
Rating	Red
Mandant	100
