Integrate Grafana with Event Management by adding Grafana as an authenticated data source.

What authentication is used

The methods of authentication are as follows:

- Basic webhook authentication: Provides a basic standard of authentication, using username and password. For more information, see [Integrate Grafana events with basic authentication](#).
- OAuth authentication: Provides enterprise-grade authentication to keep your enterprise environment safe. Authentication is performed using access tokens. For more information, see [Integrate Grafana with OAuth authentication](#).
- API key authentication: Integrate using API key to secure communication between Grafana and ServiceNow. For more information, see [Integrate Grafana with REST API key token](#).
- **Integrate Grafana events with basic authentication**
Integrate Grafana with Event Management by adding a standard webhook in the Grafana console.
- **Integrate Grafana with OAuth authentication**
Integrate Grafana with Event Management with ServiceNow using OAuth authentication.
- **Integrate Grafana with REST API key token**
Integrate using an API key to establish secure communication and automate data exchange via REST API. This simplifies integration, enabling seamless access to services and enhancing operational efficiency.
