

Integrate ThousandEyes with OAuth authentication

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

Create credentials in the instance and configure the ThousandEyes webhook.

Before you begin

Role required: web_service_admin

Procedure

1. Navigate to All > System OAuth > Application Registry and then select New.
2. Select Create an OAuth API endpoint for external clients.
3. Copy the automatically generated field Client ID.
The Client ID is used when configuring the ThousandEyes ServiceNow integration.
4. Unlock the Redirect URL field and assign the value:
`https://app.thousandeyes.com/webhooks-oauth-callback/`
5. Configure the Access and Refresh token lifespans by providing a value in seconds.
6. Open the ThousandEyes webhook configuration and complete the following fields:

Name

Any name

URL

ServiceNow ThousandEyes Push connector end point

Select Auth Type

OAuth

Grant Type

Implicit

Auth URL

`https://servicenow_instance.service-now.com/oauth_auth.do`

Client ID

Paste the Client ID automatically generated in Step 3.

7. Select Get Token.

8. Once the ThousandEyes connector navigates to a webpage requesting to connect to your ServiceNow account, select Allow.
9. Provide account credentials which have the web_service_admin role.
