Configure a push connector instance to receive the events from an external system.

Before you begin

Ensure that you've defined a push connector definition.

Role required: evt_mgmt_admin

About this task

You can use a connector instance to receive the events coming from external sources. You can create the following type of push connector instances:

- Instance type
- MID type

Procedure

1. Navigate to All > Event Management > Integrations > Push Connector Instances.
2. Select the connector instance that you want to configure, or select New to create a push connector instance.
3. On the Push Connector Instance form, fill in the fields.

For more details, see Push connector instance form.

4. Select Submit or Update.

Result

The push connector instance form is saved and now you can receive the events from an external system.
