

Exploring Service Operations Workspace for ITOM

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 3 minutes to read

Discover how Service Operations Workspace for ITOM streamlines the entire life cycle of alerts, including alert generation, notification, grouping, analysis, investigation, resolution, and closure.

Overview of Service Operations Workspace

Service Operations Workspace for ITOM provides powerful AIOps Experience capabilities, namely the Express List, Integrations Launchpad, Alert Automation, and AIOps Dashboards, each delivering unique value.

Express List

Express List revolutionizes alert management by providing a consolidated platform for efficient triage, root cause analysis (RCA), and alert remediation. With real-time updates, dynamic filtering, and an intuitive preview pane, users can effortlessly manage their alert workflows and take immediate action with unparalleled ease and speed.

Integrations Launchpad

Integrations Launchpad offers a hub of seamless connections to various external tools and services, simplifying the onboarding of new data sources. This streamlines the integration process, allowing users to effortlessly leverage their existing ITOM ecosystem within the ServiceNow platform. The Integrations Launchpad enhances data exchange and cross-platform collaboration, boosting efficiency and productivity.

Alert Automation

Alert automation provides crucial support as organizations navigate complex IT infrastructures and rising data volumes. Manual alert handling is error-prone and inefficient, underscoring the need for automated systems. By disregarding irrelevant or false-positive alerts through ignore alert automation, and by using alert enrichment, grouping, and response, these systems streamline alert response, reduce human error, and ensure consistent, timely actions.

AIOps Dashboards

AIOps Dashboards provide comprehensive visualizations of critical operational data and insights. Users can monitor key performance indicators (KPIs), track service health, and gain valuable context on the overall IT environment. These customizable dashboards empower

users with actionable insights, facilitating data-driven decision-making and ensuring proactive responses to potential issues.

When setting up the Service Operations Workspace, it's crucial to configure both IT Operations Management (ITOM) for managing alerts and IT Service Management (ITSM) for resolving incidents and delivering services. This integrated setup ensures access to the full range of features, facilitating comprehensive management of IT operations and service quality.

For more information, see [Exploring Service Operations Workspace for ITSM](#).

Operator experience in Service Operations Workspace

1. Start of day: The operator begins by reviewing an overview of alerts and metrics in the Service Operations Workspace to prioritize work.
2. Alert prioritization: The operator prioritizes alerts based on SLAs, priority level, and urgency.
3. Alert investigation: The operator investigates alerts in detail, leveraging historical data and trends.
4. Access alert information: The operator accesses all related information from the alert record page for a comprehensive view.
5. Resolve alerts: Using tailored recommendations, the operator resolves alerts efficiently.
6. Subject matter expert (SME) consultation: For complex or high-priority tasks, the operator reaches out to SMEs or uses automated tools.

7. Collaboration: The operator collaborates with team members and stakeholders directly from the alert, sharing insights and coordinating responses.
8. Initiate change requests or maintenance: To prevent future occurrences, the operator initiates change requests or maintenance activities, addressing root causes and implementing long-term solutions.

Users

Role title [name]	Description
Admin [evt_mgmt_admin]	Configures and sets up Event Management properties and rules.
Operator [evt_mgmt_operator]	Manages alerts, including closing and acknowledging them.
User [evt_mgmt_user]	Manages the lifecycle of alerts, including performing basic operations such as viewing and acknowledging them.

Benefits

Unify experience for multiple workflows

Consolidate various IT operations workflows into a single, intuitive interface, allowing seamless task management across different areas of IT operations, thus enhancing efficiency and reducing complexity.

Provide automated recommendations

Enhance efficiency and decision-making with automated recommendations tailored to operator actions.

Deliver real-time insights

Provide real-time analytics and reporting capabilities for each integrated workflow, enabling informed decision-making and proactive problem-solving by monitoring key performance metrics and tracking operational status in real-time.

Targeted experience

Offer dynamic and minimal content based on the current task, with the next task accessible with minimal clicks. Provide access to related alerts to support faster response times.

Customize configurability

Enable organizations to tailor the workspace to specific requirements and preferences, optimizing productivity by displaying relevant data and tools for each workflow.

Enhance productivity

Empower users to work more efficiently across multiple workflows by automating routine tasks, providing access to relevant information, and facilitating collaboration, thus boosting productivity organization-wide.

Scale seamlessly

Accommodate changes in workload, requirements, and operational complexity for all integrated workflows, ensuring continued support for evolving IT environments, regardless of organizational size.
