

Express List in the Service Operations Workspace for ITOM

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 2 minutes to read

The ServiceNow Event Management Express List feature helps you identify health issues across the datacenter on the Service Operations Workspace. It provides a list of quick information on alerts so you can more efficiently monitor systems and services, resolve alerts, evaluate the alert impact, track issues, and report incidents.

The Express List pane sortable alert list reduces the number of clicks necessary to access alert information. Selecting the check box of an alert opens a preview panel where you can view data that helps for prioritization, impact realization, and root cause analysis. You can easily modify the Express List pane to narrow down the display by using a provided fields list, displaying additional alert information, and filtering out or showing matching alerts. You can also modify the displayed time range.

The following image shows a sample Express List pane.

The screenshot shows the ServiceNow Express List pane for Alerts. The interface includes a top navigation bar with 'servicenow', 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. A search bar is located on the right. The main content area is titled 'Express List' and 'Alerts 36'. It features a 'Filters' sidebar on the left with options like 'Active alerts (Default)', '4 Applied conditions', and a list of fields including State, Severity, Priority, Source, Number, Configuration items, Impacted services, Node, Description, Assigned to, Assignment group, Metric name, Group, and Maintenance. The main table displays alert details with columns: Number, Description, Duration, Severity, Priority, Source, Impacted services, and Configuration items. The table lists several alerts, including 'Alert0294321' (Check CPU Total WARNING), 'Alert0294320' (Battery sensors are reporting problems), 'Alert0294317' (Fully-automated DRS-enabled cluster has high), 'Alert0294314' (Battery sensors are reporting problems), 'Alert0294311' (Fully-automated DRS-enabled cluster has CPU), 'Alert0294313' (Group of alerts, Fully-automated DRS-enabled), 'Alert0294295' (Virtual machine has disk I/O latency problem), 'Alert0294294' (Virtual machine has CPU contention due to I/O), and 'Alert0294266' (Virtual Machine on a host with BIOS power management).

Number	Description	Duration	Severity	Priority	Source	Impacted services	Configuration items
Alert0294321	Check CPU Total WARNING: The total CPU uti	29 seconds	Warning		ITOM Agent	ACC CrowdStrike ACC Docker Engine ACC Linux Server	ip-15-0-1-59
Alert0294320	Battery sensors are reporting problems	2 minutes	Critical		VMware		10.197.128.25
Alert0294317	Fully-automated DRS-enabled cluster has high	9 minutes	Minor		VMware		
Alert0294314	Battery sensors are reporting problems	34 minutes	Critical	Low	VMware		
Alert0294311	Fully-automated DRS-enabled cluster has CPU	36 minutes	Critical	Low	VMware		crucible-tokyo-nsx-
> Alert0294313	Group of alerts, Fully-automated DRS-enabled	36 minutes	Critical	High		ACC CrowdStrike ACC Docker Engine ACC Linux Server	crucible-tokyo-nsx- ip-15-0-1-59
Alert0294295	Virtual machine has disk I/O latency problem c	1 hour	Minor	Low	VMware		
Alert0294294	Virtual machine has CPU contention due to I/O	1 hour	Minor	Low	VMware		
Alert0294266	Virtual Machine on a host with BIOS power ma	2 hours	Minor	Low	VMware		

Express List benefits

The Express List pane enables operators to more efficiently perform the following actions:

- Monitoring systems or application services. Monitoring the performance and capability of computer systems to see any discrepancies.
- Resolving alerts. Working on discrepancies to troubleshoot issues and promote the efficient functioning of IT infrastructure.
- Tracking issues. Tracking and documenting defects and resolutions in detail and reporting incidents.
- Reporting incidents. Escalating complex issues to management, other IT resources, third parties or vendors.

Alert information displayed in the Express List preview panel

The Express List preview panel displays additional alert information on the Express List pane. This information enables you to conduct an assessment that helps in resolving incidents without having to open multiple alert forms.

The Info tab on the preview panel displays the following information for a selected alert:

- Alert number (link)
- Status
- Duration
- Configuration items (with links)
- Metric name
- Node
- Resource
- Source

- Assigned to
- Assignment group
- Last Updated
- Impacted services

For more information, see [View data on impacted services](#) on the preview panel in Express List.

- Additional info
- Custom field

You can view additional alert information by selecting any of the linked items.

The Alerts in group tab on the preview panel displays alert information for a selected alert group. Information for each alert is displayed in a tile with additional options for each alert in the group.

Each tile displays the following alert information:

- Alert number (link)
- Status
- Severity
- Configuration items
- Duration
- Metric name

Customizing the alert display time range

You can determine the time range of the displayed alerts. The default time range is the last 24 hours. The list continues to update with new alerts until you select the pause icon ().

Selecting the current range setting in the upper right displays a dialog box with date and time range options:

- All time - The last 90 days
- Last 24 hours
- Last week
- Last 12 hours
- Last hour
- Last 15 minutes
- Custom - Enables you to select a date and time range from the pop-up calendar.

The Default Time Range field is introduced on the Express List view in the following versions:

- Service Operations Workspace Express List 26.6.1
- Service Operations Workspace Express List App 26.4.0
- Service Operations Workspace ITOM Apps 26.9.0

Default time ranges can be defined by your administrator using the system property `evt_mgmt.express_list.all_time_days`. This property specifies the time range (in days) of displayed alerts.
