

View metrics for an alert

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

Viewing metrics enables you to understand historical data related to an alert's CI.

Before you begin

- Ensure that you install the Operational Intelligence (com.snc.sa.metric) plugin.
- Configure the metrics to be displayed for the alert, as described in [Configure alert metrics](#).

Role required: evt_mgmt_admin

Procedure

1. Navigate to Workspaces > Service Operations Workspace.
2. From the navigation bar, select the Express list icon .
3. Select an alert to open it.
4. Click the Metrics subtab.

The configured metrics appear on the page.

To customize the metrics display, configure the following properties on the [System Properties > All Properties](#) page:

- `ws_metric.widgets_number_limit`: Specify the number of widgets/records that can be displayed on the metrics tab.
 - `ws_metric.datasets_per_widget_limit`: Specify the number of charts/datasets that can be displayed on a chart.
5. In the Time range relative to alert list, select the time range for which you want the metrics to be displayed for the alert:
- 1 hour before and after (default setting)
 - 3 hours before and after
 - 5 hours before and after
 - Custom range (to configure a customized time range for the metrics to measure)
6. Click a parameter below a chart to hide the specified parameter's data on the chart.
7. **Optional:** Click the Insights Explorer button to view metrics by dragging and dropping them onto a timeline.
