

View Log Analytics anomaly alert charts on the preview panel in Express List

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

View visualizations for Health Log Analytics anomaly alerts to identify periods of behavior that deviate from expected ranges. You can view visualizations from the Express List preview panel or the alert record.

Before you begin

Role required: evt_mgmt_operator, evt_mgmt_admin

Procedure

1. Navigate to Workspaces > Service Operations Workspace.
2. From the navigation bar, select the Express list icon .
3. In the Active Alerts list, locate a Log Analytics based alert.
This option is available only for individual alerts or the underlying individual alerts within a group.
4. Choose where to view the anomaly chart.

Option	Procedure
View the chart in the preview panel	a. Select the check box for a Log Analytics based alert. b. In the preview panel, select the Info tab. A chart with a visual representation of the anomaly appears.

Option	Procedure
View the chart in the alert record	Select the number of the anomaly alert to open the alert record. The Overview tab opens by default. The anomaly chart is displayed.

5. **Optional:** Select the parameter to visualize anomaly data within that time period:

- Events per minute - The default setting, which shows the detected anomaly.
- Day ago
- Week ago

6. **Optional:** Review relevant logs in context by selecting the Open in Surrounding logs icon:

The Surrounding logs tab displays the list of log lines that were generated one minute before and one second after the Log Analytics alert. For more information, see [How Health Log Analytics generates alerts](#).
