Detailed information on all roles that can access the Express List feature on the Service Operations Workspace.

Role title	Description	Contains roles
Event Management Administrator [evt_mgmt_admin]	Has read and write access to all Event Management features to configure Event Management. Note: Be careful with the evt_mgmt_admin role because it can be elevated to the admin role.	• evt_mgmt_user • template_editor_global
Event Management Operator [evt_mgmt_operator]	In combination with the evt_mgmt_user permissions, can also activate operations on alerts such as acknowledge, close, open incident, and run remediations.	evt_mgmt_user
Event Team Operator [evt_team_operator]	Manages Event Management operations within a specific team as defined in the Assignment Group field. This role allows the operator to read and write alerts exclusively for their assigned team. Additionally, the operator can make configuration changes specific to their team, including updates to Alert Automation and Integrations Launchpad. Note: The evt_team_operator role must be assigned to an
