

Dependency View maps

- Release version: Australia
-
- Updated May 5, 2026
-
- ⌚ 1 minute to read

Explore the Dependency Views in Express List and the Event Management Alert form.

Dependency View maps are visual tools that illustrate the relationships between configuration items (CIs), helping you understand how different components are connected. These maps rely on the Configuration Management Database (CMDB) as a foundational data source, which stores detailed information about each CI and their interdependencies. By leveraging the CMDB, dependency maps provide a comprehensive view of the IT environment, enabling better impact analysis and decision-making in IT operations.

- **View data on configuration items on the preview panel in Express List**
View additional details about configuration items (CIs) that are bound to alerts on the Express List preview panel.
- **View the Dependency View map for an alert from Express List**
