

Agent Health dashboard

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 2 minutes to read

The Agent Health dashboard provides visibility into the status and distribution of agents installed in your system. It allows you to quickly assess the number of deployed agents and their distribution, helping you prioritize your work more efficiently.

The following example shows the agents in your system that are currently up, which agents are configured to collect data, and which agents have stopped data collection due to having reached their CPU threshold (Silent/Off). It also displays the agents according to their version, OS, and connected MID Server.

Prerequisites

The Agent Client Collector application must be installed.

Required ServiceNow AI Platform roles

A user must have the `agent_client_collector_admin` role to see all the widgets in the dashboard.

Access the Events and alerts dashboard

To open the dashboard, use one of the following methods:

- Navigate to All > AI Ops Dashboards > AI Ops Operational > Agent Health.
- Navigate to Workspaces > Service Operations Workspace and select the AI Ops Dashboards icon () and then select the Agent Health tab.
- After upgrading to Discovery Admin Workspace version 1.3.1 (August 2024 Store), you can navigate to Workspaces > Discovery Admin Workspace > Insights and use the enhanced dashboard.

Use case

For examples of how different people in your organization would use this dashboard, see the use case in the following table.

Table 1. Dashboard use case

User	Dashboard use
admin	Visibility into the status of the agents.

Breakdowns

Breakdowns available in the Agent Health are:

- Agent status: The status of the agents currently deployed in your system.
- Agent distribution: The distribution of the agents by the agent version number, the MID Server that the agent is assigned to, and the OS that the agent is working on.

Reports

Title	Type	Description
Agent status breakdown	Pie chart	Agents deployed in your system that are up and down. Select the relevant color in the widget to display a list of up or down agents.
Agent by data collection status	Pie chart	Agents deployed in your system with data collection turned on and off. Select the relevant color in the widget to display a list of agents with data collection on or off.

Title	Type	Description
Silent/Off (auto) agents	Line graph	Agents that automatically stopped collecting data after crossing the CPU usage threshold. The CPU usage threshold is configurable in the acc.yml configuration file. For more information on the acc.yml configuration file, see Configuration file options.
Agent by version	Bar chart	Breakdown of your deployed agents by their version numbers.
Agent by MID Server	Bar chart	Breakdown of the deployed agents according to the MID Server they're assigned to.
Agent by OS	Bar chart	Breakdown of your deployed agents according to the operating systems they are working on.
