

Start remediation of a Log Analytics alert from the Overview tab

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

Begin the remediation process of a Log Analytics alert from the alert Overview tab. This tab provides information on the alert, the log data associated with the anomalous behavior, CIs associated with the alert, and services impacted by it.

Before you begin

Role required: evt_mgmt_operator, or evt_mgmt_user, or evt_mgmt_admin

Procedure

1. In the Service Operations Workspace, select the lists icon ()
2. Select the appropriate list in the Alerts sublist and navigate to the desired alert or group.

All alerts generated by Health Log Analytics have the value Log Analytics in the Source column. The value in the Group column identifies the type of Log Analytics alert. See Types of Health Log Analytics alerts for a more detailed description of each type of alert or group.

Tip:

To preview an alert in the list, click its info icon ()

3. Select the alert number.

The Overview tab displays.

4. View the section of the Overview tab that provides the information that you need.

For a description of the sections and cards, see Sections and cards on the alert Overview tab in Health Log Analytics.

Note:

Because some sections on the Overview tab show only a portion of the information, many sections include a link that displays different or more complete information.

5. **Optional:** Run predefined remediation tasks to resolve alert issues.
 - a. Select Launch playbook.

b. Select the Playbook tab.

The Run remediation card displays the available remediation actions.

c. Select the tile corresponding to the action you want to run.

When the action is complete, it appears in the Completed card.

- **Sections and cards on the Overview tab for a Component-based alert in Health Log Analytics**
