The Overview tab in the Service Operations Workspace helps you understand Component-based alerts.

For a detailed description of Component-based alerts, see Types of Health Log Analytics alerts.

Summary

Identified issue

This card describes the issue that led to the alert. The identified issue appears on the card and in the title for the alert. Information about the alert appears in the banner.

Figure 1. Identified issue

The screenshot displays the Health Log Analytics interface. At the top, there's a header bar with 'Express List' and a search box containing 'Alert0023545'. Below this is a table with the following data:

Priority group	Severity	Component	State	Initial event generation time
Low	Warning	k8s-informer-nhwork2	Open	2026-04-28 00:00:00

Below the table are tabs: Overview (selected), Details, Related records, Surrounding Logs, and Playbook. The main content area is titled 'Summary' and contains a card titled 'Identified issue'. The card text reads: 'Why is this considered an issue? This is the dominant contributing pattern for the anomaly. The alert was triggered by a surge in the keyword 'invalid''. Below this is a description: '...1777359638739306627 , body :{ stringValue : env platform is either empty or invalid }, attributes :{{ key : flags , valu...'. There is an 'Update description' button and a link to 'View surrounding logs'.

Select View surrounding logs to view log messages that are relevant to the alert. See Analyze log lines that surround an anomaly in Health Log Analytics.

Anomaly

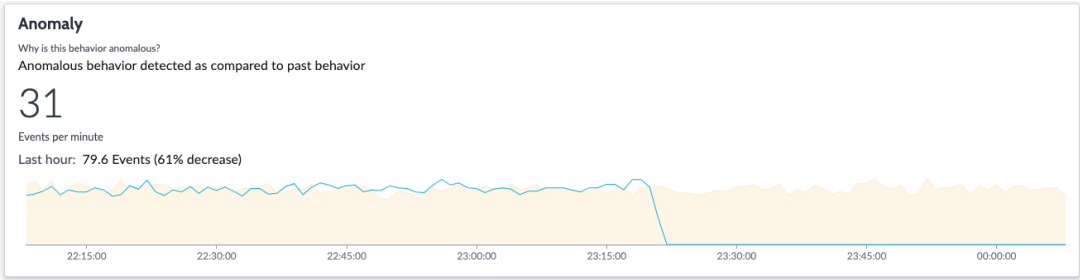

This card illustrates the anomalous activity that led to the alert.

- The blue line shows the recent anomalous activity.
- On some charts, the lightly shaded area indicates the expected (learned baseline) behavior.

A peach-shaded area represents the baseline values for the same hour one day earlier.
A pink-shaded area shows the values for the same period in the previous week.

In this example, the peach-shaded area shows the data for the same hour one day earlier. The drop in the metric value (events per minute) is clearly visible.

Figure 2. Anomaly card

For more information on the kinds of anomalies that you might encounter, see [Types of anomalous behavior in Health Log Analytics](#).

Impact

Configuration Items

This card provides information about the CIs that are impacted by the alert.

Impacted services

This card provides information about the services that are impacted by the alert.

Figure 3. Impact section

Impact				
Configuration items				
Name	Class	Location	Support group	Owned by
ip-15-0-1-116	Linux Server	(empty)	Application Support	(empty)
ip-15-0-1-152	Linux Server	(empty)	Application Support	(empty)
ip-15-0-1-165	Linux Server	(empty)	Application Support	(empty)
Pet Clinic	Mapped Application Service	(empty)	(empty)	(empty)
Impacted services				
Name	Severity	Business criticality	Support group	
Pet Clinic	Critical	1 - most critical	(empty)	

Cause

Meaningful log properties

On this card, each bar chart shows the distribution of values for a single log property that contributed to the anomaly. Each property value is associated with a color. The length of a color bar correlates to the percentage that the property value holds in comparison with all other values for the property.

Figure 4. Meaningful log properties
