

Information on the Overview tab for a Log Analytics alert in Health Log Analytics

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

The Overview tab in the Service Operations Workspace helps you understand Log Analytics alerts.

For a detailed description of Log Analytics alerts, see Types of Health Log Analytics alerts.

Summary

Identified issue

This card describes the issue that led to the alert. The identified issue appears on the card and in the title for the alert. Information about the alert appears in the banner.

Figure 1. Identified issue

The total volume of events from 'syslog' is above normal

Priority group	Severity	Component	State	Initial event generation time
Moderate	Warning	syslog	Open	2026-04-13 16:40:00

Summary

Identified issue

Why is this considered an issue?

There is a spike in the total volume of events

Description

The total volume of events from 'syslog' is above normal

[✦ Update description](#)

[View surrounding logs](#)

Select View surrounding logs to view the log lines that were generated one minute before and one minute after the alert. See Analyze log lines that surround an anomaly in Health Log

Analytics.

Anomaly

This card illustrates the anomalous activity that led to the alert.

The chart shows:

- Recent anomalous activity
- Expected behavior (the learned baseline)
- Baseline values from one day earlier
- Baseline values from the previous week

In this example, the blue line represents the current average number of events per minute. The orange-shaded area represents the baseline values for the same hour in the previous week.

Figure 2. Anomaly card with baseline values one week earlier

For more information on the kinds of anomalies that you might encounter, see [Types of anomalous behavior in Health Log Analytics](#).

Impact

Configuration Items

This card provides information about the CIs that are impacted by the alert.

Impacted services

This card provides information about the services that are impacted by the alert.

Cause

Meaningful log properties

On this card, each bar chart shows the distribution of values for a single log property that contributed to the anomaly. Each property value is associated with a color. The length of a color bar correlates to the percentage that the property value holds in comparison with all other values for the property.
