

Application service details page

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

Provides comprehensive information about an application service, including its name, business criticality, ownership, process and operational status, traffic-based discovery details, discovery status, and relevant comments. This enables thorough analysis of the application service's current state and usage, provides clarity on ownership and criticality, and aids in prioritizing resources and actions effectively.

Table 1. Application service details page fields

Field	Description
Name	Name of the application service.
Business criticality	Importance level of the service to business operations.
Owned by	Person or team responsible for managing and overseeing the service.
Process Status	Current stage or status of the service's operational processes.
Operational status	Current stage or condition of the service's operational processes, showing whether it is functioning smoothly or encountering issues.
Traffic based discovery	Option to identify service instances based on network traffic patterns.
Discovery status	System's ability to locate and recognize the service within its network.
Comments	Additional notes or pertinent information regarding the service that may be helpful for understanding its management or usage.

To return to the procedure, see [View application service details](#) in [Service Operations Workspace](#).
