

Create list fields

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

Create customized lists with fields tailored to your needs.

The form you complete varies depending on whether you choose to base your list on an existing one (Start from existing) or create a new list (Create your own).

Table 1. Start From Existing form

Field	Description
List	Existing list that you want to modify.
List Name	Name for your list. The default name in this field is the name of the existing list in the List field with <code>- Copy</code> appended.
Select columns	Record fields to include in list view. The columns from the list you selected appear. You can add or remove columns to modify the list.
Add Filters	Condition used to filter the list. By default the conditions applied to the list selected appear. You can modify this condition.

Table 2. Create Your Own form

Field	Description
List Name	Name for your list.
Select Source	Source table for the records.
Select columns	The columns to display in the list. This field is populated with columns from a Workspace list view if one exists. If a Workspace list doesn't exist, the columns are populated with the Default list view of the table selected.
Add filters	Condition used to filter the list.

To return to the procedure, see [Create a list in Service Operations Workspace for ITOM](#)
