- ⌚ 1 minute to read

The Event Management Accelerator plugin ensures that Event Management maintains performance at a high level. This plugin is optional.

Before you begin

Role required: admin

About this task

The `em_alert_history` and `em_impact_status` tables can grow to be very large, negatively impacting Event Management performance. Installing the Event Management Performance Accelerator plugin ensures that Event Management performs at a high level. The plugin includes fix scripts that populate missing data, update key fields to maintain data accuracy, and create indexes to enhance performance. These actions help optimize large datasets and reduce the impact on query speed and overall system responsiveness.

When upgrading from an earlier version with more than 5 million records in either the `em_alert_history` or `em_impact_status` tables, you must activate this plugin manually. When there are less than 5 million records, it runs automatically. You can customize this number by modifying the `evt_mgmt.plugin_activation.table_max_size` property.

To purchase a subscription, contact your ServiceNow account manager. The account manager can arrange to have the plugin activated on your organization's production and subproduction instances, generally within a few days.

If you don't have an account manager, decide to delay activation after purchase, or want to evaluate the product on a subproduction instance without charge, follow these steps.

Procedure

1. Navigate to All > System Applications > All Available Applications > All.
2. Select Request plugin to open the Activate Plugin form on Now Support.
3. On the Activate Plugin form, provide the following information.

Table 1. Activate Plugin form

Field	Description
What is your target instance	Select the instance that you want to activate the plugin on.
Which plugin would you like to activate	Select the name of the plugin to activate. Note: If the system doesn't list the plugin you want or if you're activating the plugin on an OEM or on-premise instance, select the Plugin I'm looking for is not listed check box and then enter the name of the plugin.
Select Maintenance Date and Time	Select the date and time to activate the plugin.

For example, see the following form to activate the Event Management plugin on an instance named SNC Instance.

4. Select Submit.

After the maintenance window, the system installs the plugin on your instance. To confirm the installation, go to the Installed tab in the Application Manager.
