

Configure the MID Web Server extension

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

The MID Web Server is a MID Server extension that enables developing REST APIs to send events and metrics to the MID Server. The extension is leveraged by other MID Server extensions, such as Metric Intelligence, MID WebService Event Listener, and the Agent Client Collector websocket endpoint extension.

Before you begin

- Deploy and start a MID Server.
- Enable the MID Web Server [com.snc.sa.mid.webserver] plugin.

Role required: agent_admin.

About this task

Agent Client Collector supports the following authentication strategies:

- Keybased: For backwards (pre-Australia release) compatibility only. See Configure key-based MID Web Server authentication.
- API key: See Configure MID Web Server API key authentication.
- mTLS: See MID Web Server and agent mTLS Authentication.

Procedure

1. Navigate to All > MID Server > Extensions > MID Web Server.
2. In the MID Web Server Contexts list, click New.
3. Fill in the values on the Event Management MID Web Server extension form.
4. Click Save to save the data.
5. Restart the MID Web Server extension to apply your changes.
6. Navigate to All > MID Server > Extensions > MID Web Server and select the MID Server you just created.
7. In the Related Links section, click Start to start the extension.
