

Configure a default MID Server for connectors

- Release version: Australia
-
- Updated March 12, 2026
-
- ⌚ 1 minute to read

You can set a default MID Server for connectors to ensure that there is always a MID Server available to receive external events.

Before you begin

Role required: evt_mgmt_operator

About this task

The default MID Server must have connectivity to all external event sources.

Procedure

1. Enter `sys_properties.list` in the navigation filter to open the System Property [sys_properties] table.
2. Select the `mid.server.connector_default` system property.
3. On the form, fill in the fields.

Table 1. Task Template form

Field	Description
mid.server.connector_default	Default MID Server for connectors Determines the MID Server connectors to use when no MID Server is specified. Must match a MID Server name. ◦ Type: select <code>string</code> from the list ◦ Value: enter the name of an existing MID Server, for example, SNC MID Server ◦ Location: System Property [sys_properties] table

Note:

You can reset the default MID Server by clearing the `mid.server.connector_default` property or by updating the value of this property to a different MID Server. This property

is not automatically reset in all scenarios.

4. Click Update.
